Abstract of JP 10330250 (A)

PROBLEM TO BE SOLVED: To obtain a readily handleable pharmaceutical composition useful for providing rapid solubility after oral administration by including menatrenone widely used for improving hemostatic functions in a specific carrier. SOLUTION: This pharmaceutical composition is prepared by including menatrenone in a carrier containing (a) an edible fatty oil in combination with (b) a surfactant selected from polyoxyethylene sorbitan monooleates, sorbitan sesquioleates and sucrose esters of fatty acids as a carrier therein. Beeswax or white beeswax and/or a fatty acid monoester of glycerol may further be added to the composition. Lecithin may further be contained therein. The amount of the edible fatty oil is 0.2-10 pts.wt. based on 1 pt.wt. menatrenone and the amount of the surfactant is 0.05-5 pts.wt. based on 1 pt.wt. menatrenone.
